GRAVITAZ

— HEAVY EQUIPMENT SPARES —

WELCOME TO GRAVITAZ

Engineering Reliability. Delivering Performance.

At GRAVITAZ, we specialize in supplying premium-quality replacement parts for construction and earthmoving machinery. Our commitment is to provide durable, precision-engineered components that maximize equipment performance while reducing downtime.

From axle assemblies to hydraulic components, engine parts, transmission systems, bearings, filters, seals, electrical components, and undercarriage parts, **GRAVITAZ** delivers products trusted by dealers, workshops, fleet owners, and construction professionals.

With strict quality control, advanced manufacturing standards, and customer-first service, we aim to become a trusted global partner in heavy equipment spare parts.

GRAVITAZ EARTHMOVERS CORPORATION

Manufacturer & Exporter of JCB Aftermarket Spare Parts

GRAVITAZ

— HEAVY EQUIPMENT SPARES —

MISSION & VISION

OUR MISSION

To deliver world-class heavy equipment spare parts through innovation, precision engineering, and consistent quality while building long-term partnerships with customers across the globe.

OUR VISION

To become one of the world's most trusted heavy equipment spare parts brands by continuously improving product quality, expanding our product portfolio, and delivering exceptional customer satisfaction.

OUR CORE VALUES

QUALITY

Every component is manufactured with uncompromising quality standards.

INTEGRITY

Building relationships through honesty and transparency.

INNOVATION

Continuously improving manufacturing processes and products.

COMMITMENT

Dedicated to customer satisfaction and long-term partnerships.

RELIABILITY

Delivering dependable products for demanding environments.

GRAVITAZ Evolution of JCB Backhoe Loader Engines (2000-2026)

A Filtration-Focused Technical Reference with OE Part Number Verification

Overview: Three Engine Eras

JCB backhoe loader engines moved through three broad phases between 2000 and 2026. Injection pressure rose from mechanically-governed, sub-1,000 bar systems to common-rail systems reported in the 1,600-2,000+ bar range on later EcoMAX variants, and each step raised the precision demanded of fuel filtration in particular.

Era	Approx. Years	Engine Family	Injection Type	Filtration Priority
1	2000-2005	Perkins 1000-series / Leyland-derived	Mechanical, rotary/distributor pump	Coarse-to-fine spin-on separation, cellulose lube media
2	2005-2011	JCB DieselMAX (444 series, 4.4L)	Electronic common rail (early generation)	Precision spin-on canisters with integrated water-trap sediment bowls
3	2011-2026	JCB EcoMAX (Tier 4F / CEV-IV / BS-V)	High-pressure common rail + VGT	Ultra-fine media protecting piezo/solenoid injectors; periodic filter kits

Note: JCB itself does not publish exact calendar cut-offs for these transitions, and India-market 3DX emission staging (BS-III to BS-V) lagged UK/EU CEV/Tier staging by several years, so the year ranges above should be read as approximate, general-knowledge boundaries rather than verified JCB production dates.

Era 1 — Mechanical & Early Turbo Era (c. 2000-2005)

Machines in this window ran naturally aspirated or turbocharged Perkins-derived engines with mechanical (rotary distributor pump) injection at comparatively low rail pressures. Filtration tolerances were looser, relying on coarse/fine spin-on fuel separation and standard cellulose-media lube filters.

Component	OE Part No.	Tier	Verification note
Engine oil filter	988/00038	AMBER	Confirmed genuine JCB number, sold as an oil filter for 3C/3CX/3D-era machines by multiple dealers; one UK supplier lists it specifically as a transmission oil filter rather than engine oil filter, so the exact application should be confirmed against your machine's VIN before ordering.
Primary/secondary fuel filter (spin-on, w/ drain)	32/912001 (also stamped 32/912001A)	GREEN	Genuine JCB spin-on fuel filter with drain, cross-referenced by multiple suppliers to 1998-2004 Perkins-engine and early 444 DieselMAX-era JCB models — consistent with this era.
Air filter element set	335/C1280	GREEN	Genuine inner/outer air filter set; still catalogued today, so it spans this era and later ones rather than being unique to 2000-2005 (see Era 2/3 notes).

Era 2 — The DieselMAX Revolution (c. 2005-2011)

The proprietary JCB DieselMAX 444 series 4.4L engine introduced electronically controlled, higher-pressure common-rail injection, improving low-RPM torque. Tighter injector nozzle tolerances pushed fuel filtration toward precision spin-on canisters with integrated water-trapping sediment bowls.

Component	OE Part No.	Tier	Verification note
Engine oil filter	320/04134 (cross-listed 320/04133; superseded/cross-sold as 320/B4420)	GREEN	Widely confirmed genuine JCB oil filter across DieselMAX and EcoMAX 3CX/3DX applications; still the current catalogue number in 2026.
Primary fuel filter / water separator (30 micron)	320/A7088	GREEN	Confirmed genuine 30-micron fuel filter element with water-separation function, listed across DieselMAX and EcoMAX-era 3CX/3DX applications.
Secondary fuel filter (5 micron)	320/A7170	GREEN	Confirmed genuine 5-micron secondary fuel filter. Suppliers list 320/07155, 320/07394 and 320/07057 as earlier/obsolete catalogue numbers for this same part — see Era 3 correction below.
Air filter assembly set	335/C1280	GREEN	Same genuine inner/outer set as Era 1; continues in use through EcoMAX-era 3DX machines.

Era 3 — EcoMAX & Tier 4F / CEV-IV / BS-V Era (c. 2011-2026)

The JCB EcoMAX engine, paired with variable geometry turbocharging (VGT), was engineered to meet progressively stricter emissions targets without a diesel particulate filter on most backhoe applications. India's 3DX line moved through BS-III, CEV-IV/BS-IV and on to BS-V staging within this window. Rail pressures reported for later common-rail diesels in this class run as high as roughly 1,600-2,000+ bar, which is why filtration media moved to finer, nano-net-type construction to protect piezo/solenoid injectors.

Component	OE Part No.	Tier	Verification note
Engine oil filter	320/04134 / 320/B4420	GREEN	Same genuine part carried over from Era 2; no evidence of a distinct EcoMAX-only oil filter number.
Primary fuel filter / water separator (30 micron)	320/A7088	GREEN	Carried over from Era 2 — remains the genuine primary/water-separator element on current EcoMAX 3DX machines.
Secondary fuel filter (5 micron) — current number	320/A7170	GREEN	Current genuine 5-micron secondary filter number.
Secondary fuel filter — superseded/legacy numbers	320/07394, 320/07155 (also 320/07057)	AMBER	CORRECTED from the source draft: these are not a separate “EcoMAX water separator.” They are earlier or alternate catalogue numbers for the same 5-micron secondary filter now sold as 320/A7170. One supplier's genuine JCB parts list still shows 320/07394 as an active “Fuel Filter 5 Micron” line, so treat 320/07394 and 320/A7170 as cross-referenced equivalents, not sequential EcoMAX upgrades.
Air filter assembly set	335/C1280	GREEN	Confirmed as the current genuine air filter set on 3DX machines as of 2026 listings.
Periodic filter kit (bundled oil/fuel/air, ~1000 hr service)	333/Y5572	GREEN	Confirmed genuine JCB “Filter Kit” part number, specifically listed for 3DX service at 1000-hour intervals. It is a bundled kit reference, not an individual filtration component.

The source draft's claim of injection pressures moving from “under 1,000 bar to over 2,000 bar” is directionally consistent with general industry knowledge for this engine class over 2000-2026, but Gravitaz has not located a JCB-published figure confirming an exact peak bar rating for the EcoMAX 3DX engine specifically; treat the 2,000 bar figure as an industry-typical estimate rather than a verified JCB spec until confirmed against JCB technical literature.

Consolidated OE Cross-Reference

OE Number	Component	Era	Tier
988/00038	Engine/transmission oil filter (legacy)	1	AMBER
32/912001 / 32/912001A	Fuel filter, spin-on w/ drain (legacy)	1	GREEN
320/04134 / 320/04133 / 320/B4420 320/A7088	Engine oil filter	2-3	GREEN
	Primary fuel filter / water separator, 30 micron	2-3	GREEN
320/A7170	Secondary fuel filter, 5 micron (current no.)	2-3	GREEN
320/07394 / 320/07155 / 320/07057	Secondary fuel filter, 5 micron (legacy/alt no.) Air filter, inner + outer set	2-3	AMBER
335/C1280	Filter kit, ~1000 hr service (3DX)	1-3	GREEN
333/Y5572		3	GREEN

Not carried forward from the source draft: “32/925994” was mentioned as an Era-1 fuel filter, but the only corroboration found ties it to the 320/A7088 fuel filter assembly as a cross-reference/alternate number rather than a distinct legacy part with its own confirmed era placement — it has been left out of the tables above pending stronger confirmation.

Prepared for Gravitaz Earthmovers Corporation — Manufacturer & Exporter of JCB Aftermarket Spare Parts. All OE part numbers are referenced solely for cross-compatibility identification; always confirm fitment against the specific machine's serial number/VIN before ordering. www.jcbparts.in

GRAVITAS SPARES | TECHNICAL REFERENCE ARCHITECTURE

JCB Gearbox & Transmission Evolution

Scope: **Synchro Shuttle & Powershift Driveline Architecture**

Target Asset: **JCB 3DX / 3CX / 4CX Series**

Classification: **Driveline Master & Casing Cross-Reference**

1. Executive Historical Timeline (2000 Onward)

Pre-2004: Dual Parallel Driveline Families

JCB maintained two distinct transmission lines: the **Synchro Shuttle (SS-series)**, featuring fully manual synchromesh with a clutch-based Powershuttle (SS500 early standard; SS700 following for 3CX from serial 960001); and the **Powershift (PS-series)**, utilizing an integral torque converter and electric reversing shuttle, originally deployed on side-engined Loadalls as PS700/PS750.

2004: The 2004 Model Powershift Generation — PS764 & PS766

Coinciding with the launch of the in-house Dieselmex engine, JCB introduced the **PS764** (6-speed, torque converter, electric shuttle) and **PS766**, superseding the legacy PS750/PS750 MkIII. This established the foundational architecture where **PS760** denotes the base 4-speed variant, and **PS764/766** represent 6-speed 40 kph variants sharing unified casing architectures (459/30447 front casing, 459/30363 flywheel housing).

Autoshift Control Layer Integration

The Autoshift function was integrated as an electronic control layer on top of the PS764/766 6-speed Powershift. It automates upshifts and downshifts across 4th, 5th, and 6th gears based on travel speed, incorporating a kickdown pedal for 1st gear and a manual override mode. Because this is purely control logic, manual Powershift 6-speed and Autoshift variants share identical core mechanical castings.

January 2012: SS700 Type 2 Revision

The Synchro Shuttle lineup underwent a major revision into **SS700 Type 2**, governed by a dedicated parts manual (9813/0250) separate from the original SS700 (9803/3290). This represents a hard cutover point requiring rigorous Serial Identification Number (SIN) filtering for pre- and post-2012 manual shuttle spares.

SS750 Platform Unification

The **SS750** Synchro Shuttle emerged as the consolidated manual gearbox platform across **3CX, 4CX, and 5CX** models from serial 960001 onward, streamlining prior fragmentation between SS500 and SS700 variants.

Regional Application: Where 3DX Fits

Indian-market 3DX backhoes predominantly deploy the **PS764/PS766 Powershift family** (torque converter and electric shuttle) rather than Synchro Shuttle. SS-series manual boxes remain primarily associated with export 3CX base and entry trim levels. Unlike engine emissions, transmission shifts reflect global engineering updates rather than India-specific CEV mandates.

2. Core Transmission Family Matrix & Casing Architecture

TRANSMISSION FAMILY	TYPE / OPERATION	GEARS / SPEED	CORE CASING PART NUMBERS	PRIMARY APPLICATION	VERIFICATION STATUS
SS500	Synchro Shuttle (Manual)	4-Speed Forward / Reverse	Legacy Cataloging	Early 3CX / Legacy Entry Trims	CONFIRMED
SS700 (Type 1)	Synchro Shuttle (Manual)	4-Speed Forward / Reverse	Manual 9803/3290	3CX (Pre-2012)	CONFIRMED
SS700 Type 2	Synchro Shuttle (Manual)	4-Speed Forward / Reverse	Manual 9813/0250	3CX (Post-Jan 2012)	SIN LOOKUP REQ.
SS750	Synchro Shuttle (Consolidated)	4-Speed Forward / Reverse	Unified Platform	3CX, 4CX, 5CX (Serial 960001+)	CONFIRMED
PS760	Powershift (Torque Converter)	4-Speed / Electric Shuttle	Flywheel Housing: 459/30363	Standard Utility Loaders	CONFIRMED
PS764 / PS766	Powershift / Autoshift Option	6-Speed / 40 kph	Front Casing: 459/30447	Indian 3DX, Export 3CX/4CX	CONFIRMED

3. Driveline Parts Taxonomy & Engineering Guidelines

Gravitas Spares Operational Directive

When fulfilling parts requests for transmission internal clutch packs, sealing kits, and front casing assemblies on Indian 3DX backhoes, verify whether the unit operates on the 4-speed PS760 or the 6-speed PS764/766 architecture. While casing stampings (such as 459/30447 and 459/30363) provide reliable cross-reference anchors, internal gear ratios and solenoid valve packs differ between base Powershift and Autoshift-equipped variants.

GRAVITAS SPARES | TECHNICAL REFERENCE ARCHITECTURE

JCB Engine Evolution & 3DX Platform Taxonomy

Scope: **Global Platform & Indian CEV Standards** Target Asset: **JCB 3DX / 3CX / 4CX Series** Classification: **Engineering Master & Parts Reference**

1. Executive Historical Timeline (2000 Onward)

Pre-2004: The Perkins Era

Through the early 2000s, JCB backhoe loaders (3CX/4CX, early 3DX) utilized third-party Perkins powerplants, specifically the 1000-series (1004-4T "Phaser") and earlier A-series/AT6.354 blocks. JCB did not yet manufacture proprietary diesel engines.

2004–2005: In-House Production – Dieselmex 444

In 2004, JCB became the first UK manufacturer in 60 years to build its own diesel engine: the DIESELMAX 444, a 4-cylinder 4.4-litre unit. The first production machine fitted with it was the 4CX backhoe loader in 2005. Configured as Tier 2 with mechanical fuel injection. Perkins continued supplying select displacements during the transition.

2005–2006: Bonneville Land-Speed Validation

JCB modified two 444 units to 750 hp each, setting the diesel land-speed record at 350 mph at Bonneville in 2006. This served as a high-visibility marketing and engineering proof point for durability under extreme thermal and mechanical stress.

Late 2000s–2014: Expansion & Tier 3 / CEV Stage III

By 2006, the 444 powered over half of JCB's global output; by 2009, Tier 2 mechanical engines were supplied externally to power generation, pumping, and marine sectors. In 2010, JCB opened its second major engine plant near Delhi, India. Regionally, construction-equipment emissions were regulated via **CEV Stage I (2007) → CEV Stage III/IIIA** (the "BS2/BS3-equivalent" baseline referenced in regional 3DX matrices).

~2014: Tier 4 Interim / CEV Stage III–IV – Ecomax Rebrand

Stricter emissions mandates forced major hardware evolution: VGT (Variable Geometry Turbocharger) with dedicated ECU integration, exhaust gas recirculation (EGR), and catalytic exhaust treatment. This marked the split from **Dieselmex to Ecomax**, introducing 444/448 (4.8L) variants alongside the compact 3.0L "430" block.

2016–2018: Tier 4 Final / CEV Stage IV Implementation

Incorporated high-pressure common rail (HPCR) fuel refinement, EGR, VGT, and advanced cooling fan control. India formally adopted CEV/Trem Stage IV–V standards in March 2018, though implementation deadlines saw repeated deferrals (CEV Stage IV slipping to Oct 2021; CEV/Trem Stage V to 2025–2026).

2018–2020s: Volume Milestones

JCB reached the landmark of 500,000 engines manufactured by 2018, with production velocity accelerating significantly across global and Indian manufacturing hubs.

2020s: CEV Stage V Baseline

Represents the contemporary 3DX operating baseline—deploying 444/448 Ecomax engines under CEV Stage V compliance, supported by alternative small-engine options (Perkins 400J-E Stage V, Kohler Stage V) as cataloged in current JCB ServiceMaster diagnostic documentation.

2021 Onward: Hydrogen Branch (Hydromax)

In 2021, JCB unveiled its first hydrogen-powered internal combustion engine, delivering zero CO2 emissions in the identical form-factor as diesel variants. Evolving into the **JCB Hydromax** program, culminating in a secondary Bonneville speed-record campaign in August 2026.

2. Core Platform Boundary: Dieselmax vs. Ecomax

Critical Parts Taxonomy Boundary

For 3DX and 3CX/4CX fleet management and spare parts sourcing, the fundamental hardware split exists between the **Dieselmax 444 (Mechanical, Tier 2 / CEV III)** and the **Ecomax 444/448 (Electronic, VGT + EGR, Tier 4 / CEV IV–V)**.

Filters, turbocharger assemblies, fuel injection hardware, sensor suites, and ECU wiring harnesses are **strictly non-interchangeable** across this architectural boundary. Maintenance teams must cross-reference serial numbers (SIN) prior to parts requisition.

3. Engine Generation Confidence Matrix & Variant Analysis

ENGINE FAMILY	DISPLACEMENT / CONFIG	FUEL / INJECTION	EMISSIONS TIER	PRIMARY APPLICATION	VERIFICATION STATUS
Perkins 1000- S series	4.0L / 4-Cylinder	Mechanical Rotary	Pre-Tier / Tier 1	Early 3DX, 3CX/ 4CX (Pre-2004)	CONFIRMED
Dieselmax 444	4.4L / 4-Cylinder	Mechanical Delphi DP210	Tier 2 / CEV Stage III	3DX (Legacy), 3CX (2005–2014)	CONFIRMED
Ecomax 444	4.4L / 4-Cylinder	Electronic CRIN / VGT	Tier 4i / CEV Stage IV	Standard 3DX, Export 3CX	SIN LOOKUP REQ.
Ecomax 448	4.8L / 4-Cylinder	Electronic CRIN / VGT + EGR	Tier 4F / CEV Stage V	Heavy-Duty 4CX, Modern 3DX Pro	SIN LOOKUP REQ.

2018–2020s: Volume Milestones

JCB reached the landmark of 500,000 engines manufactured by 2018, with production velocity accelerating significantly across global and Indian manufacturing hubs.

2020s: CEV Stage V Baseline

Represents the contemporary 3DX operating baseline—deploying 444/448 Ecomax engines under CEV Stage V compliance, supported by alternative small-engine options (Perkins 400J-E Stage V, Kohler Stage V) as cataloged in current JCB ServiceMaster diagnostic documentation.

2021 Onward: Hydrogen Branch (Hydromax)

In 2021, JCB unveiled its first hydrogen-powered internal combustion engine, delivering zero CO2 emissions in the identical form-factor as diesel variants. Evolving into the **JCB Hydromax** program, culminating in a secondary Bonneville speed-record campaign in August 2026.

2. Core Platform Boundary: Dieselmax vs. Ecomax

Critical Parts Taxonomy Boundary

For 3DX and 3CX/4CX fleet management and spare parts sourcing, the fundamental hardware split exists between the **Dieselmax 444 (Mechanical, Tier 2 / CEV III)** and the **Ecomax 444/448 (Electronic, VGT + EGR, Tier 4 / CEV IV–V)**.

Filters, turbocharger assemblies, fuel injection hardware, sensor suites, and ECU wiring harnesses are **strictly non-interchangeable** across this architectural boundary. Maintenance teams must cross-reference serial numbers (SIN) prior to parts requisition.

3. Engine Generation Confidence Matrix & Variant Analysis

ENGINE FAMILY	DISPLACEMENT / CONFIG	FUEL / INJECTION	EMISSIONS TIER	PRIMARY APPLICATION	VERIFICATION STATUS
Perkins 1000- S series	4.0L / 4-Cylinder	Mechanical Rotary	Pre-Tier / Tier 1	Early 3DX, 3CX/4CX (Pre-2004)	CONFIRMED
Dieselmax 444	4.4L / 4-Cylinder	Mechanical Delphi DP210	Tier 2 / CEV Stage III	3DX (Legacy), 3CX (2005–2014)	CONFIRMED
Ecomax 444	4.4L / 4-Cylinder	Electronic CRIN / VGT	Tier 4i / CEV Stage IV	Standard 3DX, Export 3CX	SIN LOOKUP REQ.
Ecomax 448	4.8L / 4-Cylinder	Electronic CRIN / VGT + EGR	Tier 4F / CEV Stage V	Heavy-Duty 4CX, Modern 3DX Pro	SIN LOOKUP REQ.

ENGINE FAMILY	DISPLACEMENT / CONFIG	FUEL / INJECTION	EMISSIONS TIER	PRIMARY APPLICATION	VERIFICATION STATUS
Ecomax 430	3.0L / 4-Cylinder	Electronic Common Rail	Stage V / Compact Spec	Compact Utility / Mini Excavators	CONFIRMED
JCB Hydroma x (H ₂)	4.4L Hydrogen IC	Hydrogen Direct Injection	Zero CO ₂ / Future	Prototype & Field Trials (2026)	EXPERIMENTAL

4. Indian CEV Norms vs. Export Equivalents

A frequent point of confusion in backhoe parts identification is the nomenclature overlap between Indian Central Excise / Ministry of Environment (CEV) standards and EPA/EU Off-Highway tiers:

- **CEV Stage III / IIIA:** Aligns functionally with Tier 2 / Tier 3 mechanical injection architectures. Characterized by inline mechanical fuel pumps and minimal electronic sensors. Dominates the installed base of legacy Indian 3DX units.
- **CEV Stage IV:** Introduced electronic control units (ECUs), high-pressure common rail fuel systems, cooled exhaust gas recirculation (EGR), and variable geometry turbochargers (VGT).
- **CEV Stage V:** The current regulatory benchmark requiring advanced aftertreatment strategies and closed-loop electronic management.

Gravitas Spares Operational Directive

When processing filtration and hydraulic/engine hose matrices for Indian 3DX units versus export 3CX/4CX models, always verify whether the unit utilizes the mechanical Diesemax block or the electronic Ecomax block. Serial Identification Number (SIN) tracking remains mandatory for all fuel system and turbocharger parts dispatch.

MAIN OE NUMBER SERIES GUIDE

Based on JCB OEM catalogs, aftermarket catalogs, and seal-kit cross references, below are the main OE number series used for JCB backhoe loader seals and seal kits.

OE SERIES	TYPICAL APPLICATION & USE	APPROX. PERIOD
550/	Early hydraulic cylinder seal kits, slew cylinders, stabilizers, loader & backhoe cylinders	2000–2010 (many active)
991/	Complete hydraulic cylinder seal kits (boom, dipper, bucket, loader lift, tilt, stabilizer, steering, kingpost, Extendahoe)	2004–Present
332/ Y**	Individual cylinder seal kits and service kits	2008–Present
332/ E**	Early hydraulic seal kits	2003–2012
333/ Y**	Updated hydraulic seal kits	2013–Present
336/ E**	Shovel ram and hydraulic cylinder seal kits	2005–Present
903/	Seal repair kits and cylinder service kits	2010–Present
904/	Oil seals, shaft seals, grease seals	2000–Present
920/	Hydraulic pump seal kits	2000–Present
983/	Breaker (HM series) seal kits	2005–Present
25/	Transmission, brake and miscellaneous seal kits	Throughout production

PINS - 2

Pins Fitment Guide

SERIES / CODE	FITMENT DESCRIPTION
811 Series	Main Pivot Pin Series
911 Series	HD Main Pivot Pin Series
913 Series	King Post Series
1019 Series	Loader and Bucket Series
120 Series	Axle and King Pin Series
191 Series	Front Axle Series
332 Series	King Post Top Pin
450 Series	Trunnion and Different Parts Series

GRAVITAS SPARES — TECHNICAL REFERENCE

Bushes Fitment Guide

Document Type: Standard
Fitment Reference

Application: Heavy Machinery &
Construction Equipment

Status: Verified &
Approved

Series / Part Code	Fitment Description
1206 Series	Small Pivot Bushes — Standard precision pivot application
1207 Series	Medium Duty Bushes — Enhanced load-bearing structural fitment
1208 Series	Dipper Bush Series — Heavy articulation arm application
1209 Series	Ram Bushes — Hydraulic cylinder mounting and pivot points
550 Series	Older Model Bushes — Legacy equipment compatibility series
880 Series	Bronze Bush — High wear-resistance brass/bronze alloy fitment
809 Series	H.D. (Heavy Duty) Bronze Bush — Extreme load & high-stress zones
831 Series	Special Application Bush — Custom engineering & specialized mountings

Shims Fitment Guide

SERIES	APPLICATION / DESCRIPTION
823 Series	Pivot, King post and general shims
819 Series	General Pivot shims
—	Axle, Gearbox, Transmission shims

Electrical Parts

SERIES	APPLICATION / DESCRIPTION
701 Series	Switches and Operator Controls
704 Series	Sensors and Senders
716 Series	Relays and Electric Modules
717 Series	Instrumentation and Monitoring
477 Series	Electrical Acc. and Lighting
25 Series	Alternators and charging components
40 Series	Starter Motor components
320 Series	Electrical Seal Kits

Hose and Fittings Specifications

SERIES	APPLICATION / DESCRIPTION
834 Series	Radiator water or air hoses / Hydraulic hoses
1604 Series	Hydraulic adapters, connections
612 Series	Hydraulic Hose pipes
2201 Series	Hose clips and retaining clips
2301 Series	O-Rings and Sealing rings used in hydraulic fittings
816 Series	Miscellaneous hardware clips
649 Series	Brake Hoses, Brake fluid pipework and vacuum system lines
332/Y Series	Hydraulic hoses
